## Bug Log

----*Chaolun Shao, Altug Gemalmaz, Avinash Prabhakar, Chau Minh Nguyen*

---

Defect No.	Defect	Output before Seeding	Output After Seeding	Suggested Corrections	Severity
1	Return all users when nothing entered in search	Pop up a warning "Not enough information" and nothing will be displayed	All the users will be displayed	Check length of string	2
2	User received several emails when the appointment is scheduled successfully	User will receive one email about the detail of appointment	User will receive four email about the detail of appointment	Create a new activity to run the "sending email" thread	2
3	Long user description caused part of description is not displayed	The description <i>editview</i> is movable and is able to be scrolled up and down	Part of description is not displayed Because the description <i>editview</i> is static	Make the textview moveable e.g:setMovementMethod()	1

4	Overlong appointment purpose caused the "Complete" button be hidden	The appointment purpose textbox is movable and will not affect other button	The "Complete" button will be push out off screen by long string above	Set a limit for character of appointment purpose	1
5	User can make appointment with himself/herself	Nothing will happen when user click himself/herself	Move to making appointment page with himself/herself	In the search activity, check if the clicked user is current user	2
6	User can add target user as extra attendee	Nothing will happen when user choose target user as the second attendee	Target user will be added as one of attendee	In the search activity, check if the clicked user is target user	2
7	The block switch will stay off status when the user is blocked	The block switch will in the right status based on the block status	The block switch will stay off status	Check the block status of user and then change the default status of block switch	2
8	The app always use 9:00 as appointment time when user did not choose appointment time and click "Next" button	Pop up a warning about incomplete information	The appointment time will be saved as 9:00	Before moving to next step, check if all the required information are selected.	1
9	The user try to make appointment with others when he or she has appointment at that time	Pop up a warning about time conflict and return to main page	The making appointment step will still be processed and the exist appointment will be overwritten	Check the schedule of current user before processing the appointment	1
10	The user_x try to add user_y as second attendee when user_y has appointment at that time	Pop up a warning about time conflict and return to main page	The making appointment step will still be processed and the exist appointment will be	Check the schedule of user_y before processing the appointment	1

			overwritten		
11	When setting the free time, the end time can be setted to earlier than start time	Displays the message, "Impossible time" and does not set the free time	Displays the message, "free time has been set" and sets the free time incorrectly or fails to set.	Add a checker to compare start time and end time	1
12	When displaying the free time, there are some duplicated time block	Displays each time interval only once in the list	Displays subset of the time intervals again in the list.	Use two <i>for loop</i> to fetch appointments and free blocks	2
13	When the user deletes an appointment, it still stays on the same page and shows the user the appointment details	It displays the main page.	It displays the appointment details page.	Ensure that after the delete button is pressed, use Intent to move to the main page and display it.	1
14	After user enters email and password to login and proceeds to the next page, the user is still able to return to the login page.	It displays the main page and the user is not able to return to the login page.	It displays the main page but the user is able to return to login page by pressing back button.	Use the finish() method to ensure that user cannot return to the previous page after he proceeds to the next one.	2
15	After the user enters the email in the pop up dialog to reset his password and presses the button, the dialog does not close.	Pop up dialog closes once the user enters email and presses the button.	Pop up dialog does not close after user enters email and presses the button	Ensure that the dialog gets closed by using dismiss() method once the button is pressed.	3
16	User is able to login even when the user has not verified his/her email.	Message displays stating "Please verify your email address"	Moves from login page and displays main page.	Add a check in login functionality to ensure that the user has verified his/her email.	1

17	User is able to change his/her password even if the new passwords entered do not match	Message displays stating "new passwords do not match" . Password of user not updated.	Message displays stating "password changed". Password of the user is updated.	Add a check to make sure that the password is updated only if both new passwords are identical	2
18	When the user tries to update the description, the address gets updated instead.	description attribute in the database gets updated when user changes description from the app.	Address attribute gets updated instead when the user changes description from the app.	Ensure that the correct value is being passed through when using Intents.	3
19	The change password section will display "password reset" even if the email to reset password is not sent.	Message displaying "Password has been reset" if successful,"Password could not be reset" if failed	Message displaying "Password has been reset" in all cases.	Use conditional check if the password has been reset and the email has been sent..	3
20	The user can enter bad word when he or she left reason for appointment	Pop up a warning "Language"	The bad word will be saved in database and will be displayed in appointment detail	Add a bad word checker to check the input of appointment reason	3
21	Time chosen by the user is converted wrongly to free interval indexes.	Time is converted to the index values correctly and database is updated to set correct values.	Time is converted to the wrong index values and database is updated to set incorrect values.	Add conditional statements to increment and decrement the indexes to the right values.	1
22	The update password section will display "password changed" even if it fails.	Displays "password changed" if successful. "Failed" if it fails.	Displays "password changed" in both cases.	Use conditional statement to check if the password change is successful or not.	2

23	User is logged in immediately after registering a new account.	Moves to start page where user must verify email and then log in.	Moves to main page without any verification.	Use .signout() method to ensure user is logged out after registration.	1
24	The user registered the account without filling the name,etc and then close the app. When the user open the app again, it will move to main page	The user can not enter main page and will stay in the same page when open the app again	Move to main page and the user's information is incomplete	Do not add the user to the database until the registration is complete	1
25	Time interval indexes are converted incorrectly, causing wrong time to be displayed on schedule.	Conversion is correct and the time intervals displayed on the schedule are accurate.	Conversion is incorrect and the time intervals displayed on the schedule are wrong.	Add multiple conditional statements to ensure the hours and minutes are correct.	1
