

# *Tendee*

## Team 9 Project Backlog

----*Chaolun Shao, Altug Gemalmaz, Avinash Prabhakar, Chau Minh Nguyen*

---

### **Problem statement:**

Meeting with people has been a challenging process for everyone. In the past, when wanting to meet face to face, people didn't know the availability of the other people. Since then the technology has improved and why not have a phone application that simplifies this problem. Any person that uses *Tendee* will be able to create an account and put their availability onto their schedule. A person who wants to meet with another will be able to search through the application and find that particular person's schedule. Looking at the availability of that person, a user will be able to book a time with that user. This appointment will be visible to both of the users.

### **Background Information:**

We believe that appointment creation would be easier if there was a simple application which was tracking the appointments. Appointments are such a fundamental thing in our life that we have them everyday. Since we have so many we tend to forget which one is when. Google Calendar has done a great job of keeping everyone's calendar, but it has not supported much booking calendar with other people. We thought it would be good if we know people's available time and set up meetings with them. Developing using mobile phone platform is our choice because people nowadays mostly have access to smartphones. We can use phone to book hotels and use Uber to call transportation. Therefore, using a phone app to book an appointment will also simplify our life.

### **Environment:**

Since our target is Android phone platform, we will use Android Studio with Java as our main programming language. We will run our server on AWS EC2. For database, we will be using AWS RDS to help with storing and fetching data.

## **Requirements:**

### **Functional:**

<b>Backlog ID</b>	<b>Functional Requirements</b>	<b>Hours</b>	<b>Status</b>
1	As a user, I would like to register a new account by using email	4	Completed in Sprint1
2	As a user I would like to login using my email address	4	Completed in Sprint1
3	As a user, I would like to log out my account.	5	Completed in Sprint1
4	As a user, when I forget my password I would like to reset it through email.	6	Completed in Sprint1
5	As a user, I would like to manage my profile.	8	Completed in Sprint1
6	As a user, I would like to change my password using my old password.	5	Completed in Sprint1
7	As a user, I would like to check my appointments	10	Completed for Sprint 2
8	As a user, I would like to set my available time	8	Completed for Sprint 2
9	As a user, I would like to mark my available time to unavailable.	8	Completed for Sprint 2
10	As a user, I would like to find other users by using email searching.	10	Completed for Sprint 2
11	As a user, I would like to check the profile of other users.	10	Completed for Sprint 2
12	As a user, I would like to make appointment with other users.	8	Completed for Sprint 2

13	As a user, I would like to view the available time of other users and to select available time when making an appointment.	8	Completed for Sprint 2
14	As a user, I would like to leave my information including name, email, phone and reason for meeting when making an appointment.	6	Completed for Sprint 2
15	As a user, after I made appointment, it should appear on the target user and my own schedule	6	Completed for Sprint 2
16	As a user, I would like to receive email when I made an appointment successfully.	6	Completed for Sprint 2
17	As a user I don't want to see inappropriate language on my schedule.	6	Completed for Sprint 2
18	As a user I would like to delete a appointment.	6	Completed for Sprint 2
19	As a user I would like to block another user from making an appointment with me.	5	Completed for sprint 2
20	As a user I would like to add more than one users to an appointment	6	Completed for sprint 2

## **Non-Functional:**

Backlog ID	Non-Functional Requirements	Hours	Status
22	As a developer, I would like to run this app on an Android device	4	Completed in Sprint1
23	As a developer, I would like to keep users' personal information secure.	5	Completed in Sprint1
24	As a developer, I would like to allow more than 20 users to use this app simultaneously.	8	Completed for Sprint 2
25	As a developer, I would like to run the back end in Firebase	10	Completed in Sprint1
26	As a developer, I would like to store our data in Firebase	8	Completed in Sprint1

# Use Cases

## Case: Create user account

### Action

1. Click Create Account button.
3. Input desired username,password,etc

### System Response

2. Opens page which takes user input.
4. Creates user and logs him in.
5. Move to main page.

## Case: User log in

### Action

- 1.Click Login Button.
3. Input credentials.

### System Response

2. Opens page where user can enter Credentials.
- 4.Logs in user and move to main page.

## Case: User log out.

### Action

- 1.Click navigation drawer side.
- 3.Click logout button.

### System Response

2. Opens up navigation drawer from left
3. Move to login page.

## Case: User forgets password

### Action

1. At login page, press forget password button.

### System Response

2. Email is sent to email address of the user which shows his password.

## Case: User resets password

### **Action**

1. At login page, press reset password Button.
3. User enters old password once and new password twice. Then user clicks The confirm button.

### **System Response**

2. Opens up page where user can make new Password.
4. Password is changed to the new one.

### **Case: View and edit profile**

#### **Action**

1. At main page, click navigation drawer
3. Click profile button.
5. Click on the detail to edit.

#### **System Response**

2. Opens up navigation drawer from the left side.
4. Opens up profile page.
6. Opens up a page where user and enter the change.

### **Case: Search for other user**

#### **Action**

1. At main page, click search button.
3. Click search bar and enter email of the desired user.

#### **System Response**

2. Opens up page with a search bar.
4. Displays the email of the desired user.

### **Case: View user schedule**

#### **Action**

1. At main page, click my appointment the Button.
2. Click on a section on the schedule to see more details.

#### **System Response**

2. Open page and display the schedule of user.
4. Opens up a dialog which shows details about the event during the time.

**Case: Select availability**

<b><u>Action</u></b>	<b><u>System Response</u></b>
1. Navigate to schedule page.	2. Pulls up schedule of the user.
3. Click on the top right plus button.	4. Opens up a dialog where user can select time when they are free or not.
5. Enter time where user is available or not.	6. Schedule is updated.

**Case: Schedule appointment with other user**

<b><u>Action</u></b>	<b><u>System Response</u></b>
1. Navigate to search page and Search for desired user.	2. Displays email of the user.
3. Click the email of the desired user.	4. Opens up a page which displays details of the desired user.
